Healthy children needed for a research study related to autism

Researchers at Penn State Hershey Children’s Hospital are looking for healthy children to participate in a research study that may help increase understanding about how certain elements in the blood, such as copper and zinc, affect symptoms of autism. Participation involves giving a small blood sample and answering a short questionnaire.

Children may be eligible if they

- Are between three and nine years old,
- Do not have autism; and
- Are relatively healthy.

Compensation is available for participation in this study.
